

Rockwell Security- BOLT AUTOMATIC SASH LOCK

ROCKWELL BOLT AUTOMATIC SASH LOCK

GENERAL DESCRIPTION

The Rockwell Bolt Automatic Sash Lock is engineered to seamlessly fit within the footprint of a standard sash lock while offering an innovative automatic locking feature. This lock enhances security with user-friendly, advanced functionality designed for modern window systems.

- **Visual Lock/Unlock Indicator:** Features a built-in indicator where the handle remains retracted until the window is fully closed. Upon locking, the handle returns to the locked position, and the keeper protrudes into the lock housing, providing a dual visual confirmation that the window is securely locked.
- **Enhanced Strength and Security:** The keeper interlocks with the lock housing and bolt in the locked position, ensuring structural integrity, improved strength, and better DP (Design Pressure) ratings.
- **Compression Feature:** Incorporates a unique compression function not found in other existing locks, providing superior sealing performance.
- **Automatic Locking Mechanism:** Offers automatic locking with a simple, user-friendly trigger, making the locking process effortless.
- **Self-Locating:** The self-locating design allows for quick and precise alignment, ensuring a perfect fit every time.
- **Compression and Forced Entry Resistance:** Built to resist forced entry while maintaining a high level of compression for improved sealing.
- **Easy Operation:** Intuitive, user-friendly design that is simple to operate for all users.
- **Egress-Compatible:** Designed to fit within egress window openings, meeting safety and accessibility requirements.
- **Multiple Patents**
